Application programming interfaces There are a number of APIs that offer a means for third-party developers to interact with AutoCAD through software interfaces. These interfaces allow for scriptable objects and provide basic functionality for developers to create plug-ins. AutoLISP, Visual LISP, VBA, C#, C++, Delphi, and VB6 are all supported. Application programming interfaces are often used for the following tasks: Extending AutoCAD's functionality to specific fields. Making AutoCAD work with third-party software that has not been integrated into the application. Creating plug-ins. Adding functionality to existing AutoCAD applications such as: Pointing tools Adding text to drawings Adding layer filters Adding menus Adding custom commands Autodesk Exchange Apps The Autodesk Exchange Apps are a marketplace where third-party developers can publish and sell AutoCAD-based applications. They are based on a number of technologies: AutoCAD API Web service XML .NET Framework Autodesk Exchange Apps can also be self-hosted. These applications are not restricted to AutoCAD, but can be used for any AutoCAD-based product.
