Welcome to Frog Ball Rerolled! We created this game for a few reasons: 1) Because I love frogs 2) Because I love Nickelodeon and Fresh Prince, I wanted to name the game after a show I've watched for over 25 years 3) I liked the name "Frog Ball", it sounded so fun and its kind of like when you reroll a new character and be like, "I'm a new character, I'm a new character". So Frog Ball Rerolled was born. 4) I wanted to create a fun little html5 game that you could play in your browser on any device, even your phone. 5) I like jello, because its weird. FAQ: Q. How do I win? A. Either you get 1 point for completing all 5 goals in 5 minutes, or it changes to 10 points and you must complete the goals in 8 minutes. Q. I don't know how to get 5 points. Is there any way? A. No, but please try again in future. If you get 100 points then you get the my other game. (Note: I will give out my second game free if your score of 100 points or above in this game). 9) This guy is the most annoying. What do you do with him? 10) George is on the seventh level and he still hasn't done anything other than jump around. Wait, it's working! 11) Oh God, what if Freddy is on a level or two higher than George? 12) Wait, five points don't add up to the bullfrog's level? And I just got three points? Q. Can you add a "Fresher's Cleanser" mode? A. Yes, I will be adding it. I just need to find a way for it to work. Q. These levels are so hard! Will I ever beat this game? A. Yes, if you give up. Thanks For Reading! I hope you enjoy Frog Ball Rerolled! This game is in production at the moment, expect more updates on the game soon! 9) This guy is the most annoying. What do you do with him? 10) George is on the seventh level and he still hasn't done anything other than jump around. Wait, it's working! 11) Oh God, what if Freddy is on

The battle system is the main focus of the game and it will probably appeal those who like duel games. Players will fight with one opponent against the other. There are four buttons: Arts, attacks, block and evade. The art buttons are used to perform the special attacks. A quick press of Arts button will deal the opponent a couple of heavy blows, but sometimes players will also receive a damage as a result of an attack. An attack can also be interrupted with a block, but sometimes the damage will even double or triple if you block an attack during its progression. The evasion button will help players to escape any of the enemy's attacks. Several different evasion methods are present: evading when pressing the block button only, by running or by devious methods like spinning with the attack button or some other methods. Players will also be able to spin using the direction key in front of the keypad. Running back and forth is another way of evading.

1. Field of the Invention The present invention generally relates to a method for fabricating a semiconductor device, and more particularly, to a method for fabricating a dual work function metal gate transistor.

2. Description of the Prior Art The rapid development in the fabrication of integrated circuits (IC) and the demand for further improvement in the integration density of the ICs require the development of new technologies and improvement in existing technologies. For example, the device is gradually reduced in size, of which the more precise and smaller the device, the smaller the gate length and thickness of the gate dielectric layer and the higher the ability of the transistor to switch. As a result, the device is more stable and works more efficiently. Conventionally, the formation of the metal gate electrode is by lift-off process. The conventional lift-off process includes the following steps: firstly, forming a spacer on the surface of the substrate, and then etching the substrate to form the gate trench. Next, filling the gate trench with a first metal layer and anisotropically etching to the first metal layer, and finally covering the first metal layer by a protective layer. Thus, the metal gate electrode is formed. However, the lift-off process may cause the short between the gate electrode and the source/drain, and the gate electrode with a non-conformal characteristic is in the trend to stay on the sidewall of the gate trench. The non-conformal gate electrode may affect the current, and accordingly, the channel current of

Twenty were built in two batches, and entered service between 1986 and 1989. The first 8 were numbered WK321-WK328, and the remaining 12 WK329-WK340. Being smaller than German locomotives of the time and a sizeable improvement over former FE 162s, the unit is, by now, one of the most common locos used in freight transport in the world. Even with newer loco (e.g. A 7800) and diesel multiple units, the Ks 250 remains a workhorse until today.
