What's New In Microsoft Forefront Security For SharePoint?

Microsoft Forefront Security for SharePoint (PCC2040) is a product for Microsoft Office SharePoint Server 2007 that helps protect Microsoft Office SharePoint Server 2007 environments against threats by helping eliminate malicious documents that may harm network resources or cause disruptions. This product helps protect and secure your Microsoft Office SharePoint Server 2007 infrastructure by scanning documents for malicious code, viruses, and spyware. Benefits: - Protects your Microsoft Office SharePoint Server 2007 infrastructure by eliminating malicious documents before they reach the Microsoft Office SharePoint Server 2007 collaboration environment - Scans documents for malicious code, viruses, and spyware - Protects against malicious code, viruses, and spyware Overview of Functions: Microsoft Forefront Security for SharePoint (PCC2040) is a component of the Forefront Client Security for SharePoint suite, which includes products that help protect Microsoft SharePoint products from attacks and help eliminate malicious documents. It can be installed on the same computer running the Forefront Client Security for SharePoint suite. To determine if you are eligible to receive products from Microsoft or from Microsoft partners, contact your Microsoft representative or visit [Key Features Scan Documents with Malicious Code, Viruses, and Spyware](#) Microsoft Forefront Security for SharePoint (PCC2040) scans documents for malicious code, viruses, and spyware. It is installed on a computer running Forefront Client Security for SharePoint, or the suite can be installed on a computer that is not running Forefront Client Security for SharePoint. The suite is also available as a standalone product for

Microsoft Office SharePoint Server 2007. When a user attaches a document to a list or site, the document is scanned for malicious code, viruses, and spyware and is categorized based on the user's content policies. The document is then scanned by the appropriate engine for the specified content type, and the appropriate action for the identified threats is taken. Administrators can view summary reports of malicious documents that have been identified by the engines and can then take appropriate action to protect their environment. Detect and Eliminate Malicious Code, Viruses, and Spyware Microsoft Forefront Security for SharePoint (PCC2040) scans documents for malicious code, viruses, and spyware and can eliminate malicious content before the document is added to a list or site. The engines in Forefront Client Security for SharePoint must be installed on the same computer as the product. The suite can be installed on a computer running the product or it can be installed on a computer that is not running Forefront Client Security for SharePoint. Protect Documents before They Are Saved or Retrieved Microsoft Forefront Security for SharePoint (PCC2040) can scan documents for malicious code, viruses, and spyware and can eliminate malicious content before the document is saved to or retrieved from the SharePoint document library. The engines
