My objectives were no less than to give you three major reasons to use Adobe CS6. The first reason is visual fidelity and image-getting abilities. The settings for this one create a pleasing finish in areas of blue, red and green. Wow. I didn't even know that. That sounds nice as an added function. Are you suggesting that Adobe takes over the application if it sees something that it thinks is suspicious? I see what you are getting at, Len; I just don't think that's a good idea. I think this is awesome since we're running Photoshop doing video editing on a Black Macbook Pro. We'll try to cut on a Black MacBook Pro. It's so hard running a Digital SLR with a MacBook. Graphics card is good but the MacBook can't do it and you know what happens when I try to run Photoshop. LOL The lessons we have learned so far are this, ONLY WORK ON AS MARVIN! If not, your tests might not resemble the real thing! Unfortunately, this is the second Dslr with a Black screen. I checked and it's Adobe. Not sure what to conclude. I can't get Lightroom 6 on my Macbook Pro 2015 since I changed to MacOS Mojave when I updated my iMac. Going to need to buy a $960 senior computer to use Adobe applications, which still sucks! Darn! This review does not validate Sony A99 II. If you need more convincing, take some photos side by side with either of the cameras on the Nikon site. I think you'll find that the results are identical. Tons of detail and color science with the Sony, no doubt. That's my takeaway from my experience.
